

Instructions for Using Deer Pharm Concentrate.

Do not open the container indoors.

Water plants to be treated liberally in the AM. That evening, spray plants to be protected. Spraying in the evening lengthens drying time avoids the possibility of leaf burn in high temperatures. Do not spray near open bedroom windows.

Not for use in Grizzly Bear country.

Mix 14 ounces Deer Pharm Concentrate to one gallon of water. Spray liberally over all bedding plants, vegetables, ornamentals and trees. Please use weekly for best results. You will find after several weeks use you can spot treat on your property perimeter to keep the deer at bay. We have even been able to stop spraying altogether until they reappear, though one must be careful with this approach.

Please share your success stories !

Happy gardening,

The Staff at Pharm Solutions Inc.
